2292 7590 10/15/2010 BIRCH STEWART KOLASCH & BIRCH PO BOX 747 FALLS CHURCH, VA 22040-0747			EXAMINER KEMMERLE III, RUSSELL J	
			ART UNIT 1741	PAPER NUMBER
			NOTIFICATION DATE 10/15/2010	DELIVERY MODE ELECTRONIC

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Notice of the Office communication was sent electronically on above-indicated "Notification Date" to the following e-mail address(es):

mailroom@bskb.com

Office Action Summary	Application No. 10/771,328	Applicant(s) TABUCHI ET AL.	
	Examiner RUSSELL J. KEMMERLE III	Art Unit 1741	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 30 September 2010.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1,2,4,6,7 and 10-13 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1,2,4,6,7 and 10-13 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

In view of the amendments made by Applicants the previous rejection under 35 USC §112 is withdrawn.

Claim Rejections - 35 USC § 103

Claims 1, and 11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Noe (US Patent 5,494,055) in view of Miyauchi (US Published Application 2002/0,074,007) and Le Gars (US Patent 5,143,099).

Noe teaches a rod shaped filler including tobacco, an inner wrapper surrounding the rod shaped filler, an outer wrapper surrounding the inner wrapper, and a perfume layer in between the inner and outer wrapper that weakens the odor of the sidestream smoke (claim 1). Noe further discloses covering the entire surface of the inner wrapper with the perfume material (Col 4 lines 30-40). Noe discloses that the perfume material be a microcapsule which is considered to be a grain or powder (Col 4 lines 40-50). Noe specifically discloses that the perfume material be applied to the cigarette rod covering (inner wrapper) (claim 11).

Noe does not expressly teach that the perfume emitting layer contain a glue for carrying the perfume material.

Miyauchi discloses a method of improving the smell of a sidestream smoke of tobacco, where a perfume material is used to improve the smell, and a polyvinyl acetate glue may be used as the carrier for the perfume material (abstract). Miyauchi further

Art Unit: 1741

discloses that an adhesive be applied as seam adhesive to keep the outer wrapper sealed (page 3, paragraph 29).

It would have been obvious to one of ordinary skill in the art, at the time of invention by applicant, to have modified the method taught by Noe of forming a cigarette by using the method taught by Miyauchi of using polyvinyl acetate glue as the carrier for the perfume material. This would have been obvious because Miyauchi discloses that such glue is helpful in adhering a perfume material to a cigarette wrapper.

Le Gars discloses a double wrapped cigarette which results in less spotting, and specifically recommends that the inner wrapper have a width corresponding exactly to the cigarette circumference, so that there is no overlap (Col 2 lines 59-66).

Thus, it would have been further obvious to one of ordinary skill in the art, at the time of invention by applicant, to have modified the cigarette of Noe and Miyauchi as discussed above by using an inner wrapper which corresponds exactly to the circumference of the cigarette and has no overlap when formed. This would have been obvious because Le Gars discloses this as a way of reducing the spotting on a cigarette.

Referring to claim 11, Miyauchi discloses that the glue used to carry the perfume material is the same as seam glue used (page 3, paragraph 29).

Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Noe in view of Miyauchi, Le Gars and Baker (US Patent 4,624,268)

Noe Miyauchi and Le Gars are relied upon as discussed above, but do not expressly teach the use of an additive for reducing the sidestream smoke.

Baker teaches that sidestream smoke may be reduced by the use of chemicals added to the cigarette paper (abstract).

It would have been obvious to one of ordinary skill in the art, at the time of invention by applicant, to have modified the invention taught by Noe in view of Miyauchi as discussed above, by adding the sidestream smoke reducing chemicals of Baker to the cigarette paper. This would have been obvious in order to achieve the desired result of reduced sidestream smoke.

Claims 6-8, 10, 12 and 13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Noe in view of Miyauchi, Le Gars, Lowman (US Patent 2,999,520), Marchese (US Patent 2,320,702) and Eckstein (US Published Application 2001/0,009,938).

Referring to claim 6, Noe teaches a machine for manufacturing double wrapper cigarettes having a first and second path for inner and outer wrappers, a wrapping section, a perfume supply device supplying perfume to one of the webs between the webs to weaken the odor of sidestream smoke, and covering the entire inner surface of the inner wrapper (Col 4 lines 10-50).

Noe does not specifically disclose a glue for carrying the perfume material, or a cutting section for cutting sections of a predetermined length.

Miyauchi discloses polyvinyl acetate glue as a good carrier of perfume materials (abstract).

Lowman teaches a cigarette machine that involves a cutter for creating sections of a predetermined length (Col 2 lines 50-53).

Art Unit: 1741

It would have been obvious to one of ordinary skill in the art, at the time of invention by applicant, to modify the manufacturing machine of Noe by further incorporating the glue of Miyauchi to carry the perfume material. This would have been obvious because Miyauchi discloses that the use of such a glue as a carrier for a perfume material is effective in reducing sidestream smoke. It would have been further obvious to use a cutter such as the one taught by Lowman since such a device is necessary for processing cigarettes into the desired size.

Noe further discloses applying glue and spraying (diffusing) (Col 4 lines 10-50), which would require the use of a nozzle.

Eckstein teaches that brush coating is customary in the paper industry (paragraph 110).

Marchese teaches the removal of a surplus material from a carrier using a brush roller (Page 2, Col 2 lines 48-52).

It would have been obvious to one of ordinary skill in the art, at the time of invention by applicant, to modify the method taught by Noe, Miyauchi and Lowman as discussed above, by using a brush to coat the perfume material onto the web, and to then later use a brush roller to remove any excess perfume material as taught by Eckstein and Marchese, respectively. This would have been obvious because these are taught to effective means of getting a desired quantity and quality of a coating material on a carrier.

Further, the placement of a cover over an area where a fluid is being sprayed or applied is well known across many arts as a method of preventing that fluid from

Art Unit: 1741

spraying to other parts of the production facility and would have been obvious to those skilled in the art as a way of preventing the fluid from being sprayed on other areas of the machine.

Response to Arguments

Applicant's arguments filed 30 September 2010 have been fully considered but they are not persuasive.

Applicants argue that the applied references fail to teach the claim limitations as currently amended, specifically that the perfume applying layer be applied to the entire outer surface of the inner wrapper.

This is not found to be persuasive, as discussed above, Noe discloses covering the entire outer surface of the inner wrapper with the perfume emitting material.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to RUSSELL J. KEMMERLE III whose telephone number is (571)272-6509. The examiner can normally be reached on Monday through Thursday, 7:00-5:00 EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Matthew Daniels can be reached on 571-272-2450. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
